Descriptors-*Accreditation (Institutions), *Educational Programs, Inservice Teacher Education, *Masters Degrees, Preservice Education, *Teacher Certification, *Teacher Education

Three kinds of information are included in this state-by-state listing of institutions reported to have Master of Arts in Teaching (MAT) programs; the number of persons made eligible for initial certification through MAT programs during 1967, the total number of undergraduate and graduate students made eligible for initial certification through all kinds of programs in 1967, and accreditation status with the National Council of Accreditation (NCATE). Data included in this document, prepared in response to requests for information on MAT programs, is derived from TEACHER PRODUCTIVITY--1967, published by The American Association of Colleges for Teacher Education (AACTE). Shared objectives of MAT programs are briefly enumerated and include making college graduates eligible for certification and enabling inservice teachers to add an additional teaching field to the one in which they are now certified. A table presenting the variations from state to state in the number of persons reported to have been made eligible for initial certification through MAT programs is included in the introduction, along with totals of the number of people made eligible for initial certification through both MAT programs and all kinds of programs. A major limitation of the data, that all MAT programs are included regardless of their nature, is also noted. (SM)

Washington, D. C.

PREFACE

This document was prepared in response to continuing requests for information on Master of Arts in Teaching (MAT) programs. Three kinds of information are included in this state by state listing of institutions reported to have MAT programs: (a) number of persons made eligible for initial certification through MAT programs during 1967--the most recent data available, (b) the total number of undergraduate and graduate students made eligible for initial certification through all kinds of programs in 1967, (c) accreditation status with the National Council of Accreditation of Teacher Education.

The information reported herein was derived from *Teacher Productivity-1967*, published by the American Association of Colleges for Teacher Education and developed from annual reports which include 1967 data from more than 800 member institutions, which AACTE claims to produce more than 90 percent of American Teachers, and data from other four year institutions which reported data to AACTE. This ERIC Clearinghouse publication reports data in two categories used in the AACTE publication: by AACTE members and by other institutions from which data were received. *Teacher Productivity - 1967* includes much data not reported in this ERIC Clearinghouse publication.

There are wide variations from state to state in the number of persons reported to have been made eligible for initial certification through MAT programs, as shown below:

Reported Range	0	1-50	51-100	101-200	201-300	301-400	401-500	501 or above
Number of States*	15	1	0	3	5	2	4	22

*Includes District of Columbia and Puerto Rico.

The institutions reported 5,333 initially certified persons produced through MAT programs; these institutions reported 40,783 persons made eligible for initial certification through all kinds of undergraduate and graduate programs.

While this publication is limited in scope, it should be a useful document for those interested in MAT programs. A major limitation of these data should be noted: MAT programs regardless of their nature are included in this report. Presumably, all share certain objectives: (a) making eligible for certification qualified college graduates (who have not taken professional courses and secured experiences required for

successful teaching and certification to teach), (b) enabling in-service teachers to add an additional teaching field to the one(s) in which they are now certified. Data reported herein, it should be remembered, are for numbers of individuals made eligible for initial certification through MAT programs. These data are presented as tools to be used with a knowledge of both of their value and also of their limitations.

Dr. Joel Burdin, Director

February, 1969
